

## Java

```
class Solution {  
    public int countCharacters(String[] words, String chars) {  
  
    }  
}
```

---

## JavaScript

```
/**  
 * @param {string[]} words  
 * @param {string} chars  
 * @return {number}  
 */  
var countCharacters = function(words, chars) {  
  
};
```

---

## C++

```
class Solution {  
public:  
    int countCharacters(vector<string>& words, string chars) {  
  
    }  
};
```

---

## C#

```
public class Solution {  
    public int CountCharacters(string[] words, string chars) {  
  
    }  
}
```

---
